DETAILED ACTION

This action is in response to the preliminary amendment filed on 5/12/2006.

Allowable Subject Matter

1. Claims 1, 5-10, and 14-17 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. The examiner notes that X references cited on the international search report corresponding to this case apply to original claims of the case and not to amended claims presented in the preliminary amendment.
4. The prior art does not teach or suggest a tripod head with rotor and stator, compensating device for compensation of weight moment, wherein the compensating device has an energy storing device and auxiliary device which brings about the transmission of the rotational movement from the rotor to the energy storing device, and which has a shaft likewise pivoted around an axis in relation to the stator and a *means for* transmitting the rotational movement of the rotor to the shaft such that during the tilt movement the restoring moment exerted on the rotor by the energy storing device is influenced by the rotation of the shaft around the axis. Further, the prior art does not teach or suggest that said auxiliary device has a roll contact gear which is formed by a roll contact area of the rotor and roll contact area of the auxiliary device, wherein the cross-sectional shape of the roll contact areas (of the rotor and the auxiliary device) is optimized such that the restoring moment changes sinusoidally with the tilt angle.

5. It is noted that the "means for transmitting the rotational movement to the shaft" in claim 1 is disclosed in the specification page 7 paragraphs 2-5, comprising two bands or belts which transmit rotational movement from the rotor to the shaft.
6. Closest prior art:
7. GB2080406A (Jaumann; corresponds to DE3026379) and US5413295 (Ishikawa). Neither Jaumann or Ishikawa teach or suggest a roll contact gear formed by roll contact areas of the rotor and the auxiliary device, nor that the restoring moment/torque/force changes essentially sinusoidally.
8. US5605101 (Lindsay): Lindsay does not teach or suggest a tripod head with a compensating device for compensation of a weight moment which has an auxiliary device with a means for transmitting rotational movement of the rotor to the shaft such as that disclosed in the instant application. Lindsay also does not teach or suggest an auxiliary device with a roll contact gear which is formed by a roll contact area of the rotor and roll contact area of the auxiliary device whereby the shape of the cross section of these roll contact areas (of the rotor and the auxiliary device) is optimized such that the restoring moment changes sinusoidally with tilt angle.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
